Program Description: The ARCM Diversified Momentum Strategy uses a systematic, quantitative approach, to trade and strictly manage risk across a current universe of 31 futures contracts in eight market sectors (Financial Instruments - Govt. Securities, Foreign Currencies, Stock Indexes, Grains, Metals, Energies, Meats, Crypto (Futures), and Soft Commodities). All traded markets have significant volume and liquidity and are traded on major regulated Futures Exchanges. The heart of the Diversified Momentum Component has been derived from Mr. Abrams' experience and knowledge of Time Series Momentum and Cycle Identification. ARCM utilizes proprietary analysis to measure and ultimately act upon changes in price behavior driven by fundamental, technical, and discretionary shifts in supply and demand balance. In short, the Diversified Momentum Component is designed to take advantage of what ARCM believes are rhythms and rhymes created within individual derivatives markets. Algorithms are in place that dynamically identify these situations and opportunistically take advantage of them using a measured and risk-managed methodology.

The recovery begins in the following month, and the length of the recovery period is listed under recovery. The date listed as end is the month that the program recovered from the drawdown.

Please note that the monthly performance numbers, ROR and Drawdowns are based on end of month values and are not reflective of intramonth volatility.

Statistical Notes

1. Peak to Valley Drawdown ("Maximum Drawdown") is the worst drawdown % loss over the period of 2019-07-31 to 2024-09-30
2. The Annualized Compounded ROR is the average return of an investment over a number of years. It smoothes out returns by assuming constant growth.
3. Calmar Ratio Uses last 36 months of Data

ROR = Rate of Return

SP 500 TR: The S&P 500 indices are designed to reflect all sectors of the U.S. equity markets. The S&P 500 includes 500 blue chip, large cap stocks, which together represent about 75% of the total U.S. equities market. Companies eligible for addition to the S&P 500 have market capitalization of at least US\$3.5 billion. The TR Index accounts for the reinvestment of dividends.
