Program Description: The ARCM Diversified Momentum Strategy uses a systematic, quantitative approach, to trade and strictly manage risk across a current universe of 31 futures contracts in eight market sectors (Financial Instruments - Govt. Securities, Foreign Currencies, Stock Indexes, Grains, Metals, Energies, Meats, Crypto (Futures), and Soft Commodities). All traded markets have significant volume and liquidity and are traded on major regulated Futures Exchanges. The heart of the Diversified Momentum Component has been derived from Mr. Abrams' experience and knowledge of Time Series Momentum and Cycle Identification. ARCM utilizes proprietary analysis to measure and ultimately act upon changes in price behavior driven by fundamental, technical, and discretionary shifts in supply and demand balance. In short, the Diversified Momentum Component is designed to take advantage of what ARCM believes are rhythms and rhymes created within individual derivatives markets. Algorithms are in place that dynamically identify these situations and opportunistically take advantage of them using a measured and risk-managed methodology.
