Program Description: Neutral is aimed at risk-adjusted return to achieve consistent absolute profits. It invests mainly in near-expiration option spreads on S&P500. Its investments are generally managed to be "market neutral", especially "Vega neutral". The strategy is designed, with a large profit window and high probability, to capture profit in both rising and falling markets. It evolved out of our extensive experience in trading the major US stock index futures and related options, and utilizes our patent allowed techniques to make high probability trades only when potential profits are significantly higher than potential losses.
