Program Description: The WaveFront Global Investment Program holds as its central investment tenet the belief that markets exhibit serial correlation or price trends and other persistent anomalies that cannot be explained by random behavior or the assumption of fully informed and rational market participants. Price trends, or serial correlation in market prices, may be the result of many factors including deeply rooted supply and demand trends for physical commodities, equity risk premiums, persistent interest rate differentials between currencies, the basis embedded in the term structure of futures prices and the crowd behavior of market participants. The Wavefront Global Investment Program utilizes proprietary systematic trading strategies to invest in long-term price trends in over 60 industrial, agricultural and financial futures markets.
