**The Notes Below Are An Integral Part of this Report | Track Record Compiled By: IQ-EQ Fund Administrator**

**Program Description:** Chelton Wealth's Currency Alpha program employs supply and demand trading. Supply and demand trading is a trading method where the idea is to find points in the market where price has made a strong advance or decline and mark these areas as supply and demand zones using rectangles. The point in which the price has made a strong advance is marked by the trader as a demand zone. A point where the market has made a sharp decline is marked as a supply zone. The main premise of supply and demand trading is when the market makes a sharp move up or down and the large institutions (i.e., banks and hedge funds) are not able to get their entire trade placed into the market, therefore they leave pending orders to buy or sell at the zone with the expectation that the market will return to the zone and the rest of their trading position will be filled. The Markets traded include G10 currency majors and crosses, Gold (XAUUSD), WTI and Indices CFDs. (This is also available as a spot FX Only strategy). Managed accounts may be denominated in CHF, EUR, GBP and USD.

**Investment Information**

Program Start Date	Mar-2018
Minimum Investment	100,000
Management Fee	2.00%
Incentive Fee	20.00%
Margin	9%-18%
Round Turns per Million	0
Currency	Euro
NFA No:	#

Largest Monthly Gain	7.23%	12.82%
Largest Monthly Loss	-12.77%	-12.35%
Correlation	—	0.077
Last 12 Months	-1.86%	36.36%
Last 36 Months	38.17%	40.18%

**PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS. TRADING FUTURES AND OPTIONS INVOLVES SUBSTANTIAL RISK OF LOSS AND IS NOT SUITABLE FOR ALL INVESTORS. THERE ARE NO GUARANTEES OF PROFIT. PROSPECTIVE CLIENTS SHOULD NOT BASE THEIR DECISION TO INVEST SOLELY ON THE PAST PERFORMANCE PRESENTED HEREIN.**

+ **NOTES:** Returns are based on proprietary accounts. Client accounts will be traded in like fashion. Results may differ, i.e., broker's spread and execution charges, fees, swap rates, slippage/execution delay, asset/product offering / deposit and risk settings.

The commissions and fees incurred on the purchase or sale of specific financial product illustrated are not included in the performance shown.

#### Disclosure

OTC Derivatives trading are high-risk investments. OTC Derivatives are leveraged products that can result in losses exceeding your initial deposit. Trading OTC Derivatives on margin carries a high level of risk, and may not be suitable for all individuals. The high degree of leverage offered can work against you as well as for you.

This is not a solicitation to invest and you should carefully consider your financial situation as to the suitability to your situation prior to making any investment or entering into any transaction. You should make yourself aware of all the risks associated with OTC Derivatives trading and seek advice from an independent financial advisor if you have any questions or concerns.

Past performance is not indicative of future results, returns may vary according to market conditions. Trading OTC Derivatives is speculative and may involve the loss of principal; therefore, funds placed under management should be risk capital funds that if lost will not significantly affect one's personal financial well-being.

No representation is being made that participating in a managed account will necessarily lead to profit. Investors may incur a series of consecutive losses and substantial equity drawdowns that can deplete their funds before the occurrence of any meaningful profit accumulation.

\*\* The drawdown begins in the month listed as start. The length in months of the drawdown is listed under length. The recovery begins in the following month, and the length of the recovery period is listed under recovery. The date listed as end is the month that the program recovered from the drawdown.

Please note that the monthly performance numbers, ROR and Drawdowns are based on end of month values and are not reflective of intramonth volatility.

#### Statistical Notes

1. Peak to Valley Drawdown ("Maximum Drawdown") is the worst drawdown % loss over the period of 2019-01-31 to 2024-09-30
2. The Annualized Compounded ROR is the average return of an investment over a number of years. It smoothes out returns by assuming constant growth.
3. Calmar Ratio Uses last 36 months of Data

#### ROR = Rate of Return

**SP 500 TR:** The S&P 500 indices are designed to reflect all sectors of the U.S. equity markets. The S&P 500 includes 500 blue chip, large cap stocks, which together represent about 75% of the total U.S. equities market. Companies eligible for addition to the S&P 500 have market capitalization of at least US\$3.5 billion. The TR Index accounts for the reinvestment of dividends.
