Program Description: The Futures Trading Program is a proprietary systematic long-term trend following system developed by Scot Lowry. Mr. Lowry converted his knowledge and research of the markets into a mechanical trading approach. The Program looks for specific turning points which signal new trends, and attempts to enter trades earlier than most long-term technical systems. The Program is 99% mechanical, based on technical data, using price information to signal entry and exit points. The only discretion used is to add or delete markets traded due to liquidity issues. The Futures Trading Program trades on-exchange futures and currencies in Asia, Europe and the United States. It also trades Metal Contracts on the LME exchange in London. The Futures Trading Program employs its own built in risk management procedures to limit risk to individual trades and provide overall portfolio protection.

+ **NOTES:** The performance listed is based on the performance of an exempt pool (L&E Investment Group, L.P. is an exempt pool under CFTC rule 4.13). This pool trades in Futures Program that was created and operated by Scot Lowry. The capsule shows only the performance of the Futures Program. The account was funded with an initial amount of \$210,000 actual and \$290,000 of notional funds (\$500,000 nominal). In November 2001 when the actual funds reached 393,000 an additional notional amount was added of \$250,000 bringing the total account to approximately 933,000 (at that point). On January 1, 2004 \$360,000 of notional funding was added, bringing the total notional funding to \$900,000. On August 1, 2008 the notional funding was reduced by \$300,000 bringing the total notional funding level to \$600,000.

** The drawdown begins in the month listed as start. The length in months of the drawdown is listed under length. The recovery begins in the following month, and the length of the recovery period is listed under recovery. The date listed as end is the month that the program recovered from the drawdown.

Please note that the monthly performance numbers, ROR and Drawdowns are based on end of month values and are not reflective of intramonth volatility.
