The Notes Below Are An Integral Part of this Report | Track Record Compiled By: Self-Prepared

Program Description: Risk Sigma is a short term mean reversion trading program focused on S&P 500 Futures and Options. It has average 5~10 days holding period. Shorter trading time frame and higher turnover seeks to reduce program volatility exposure and draw downs. Our strategy is generated by rigorous mathematical and quantitative models without having doctrinaire perspective favoring any prescribed textbook investing or trading methodology. Following the ebb and flow of market actions, we not only look at absolute returns but also focus on risk adjusted returns. Risk Sigma is available through managed accounts and offers daily transparency. We trade liquid product and can offer weekly liquidity. The program's goal is to maintain a Sharpe Ratio of high 2. The design of Risk Sigma is not keyed or correlated with other major indices such as S&P500, and thus offers great diversification value to investors.

Investment Information

Program Start Date	Mar-2015
Minimum Investment	125,000
Management Fee	2.00%
Incentive Fee	20.00%
Margin	0.35
Round Turns per Million	10,000
Currency	US Dollar
NFA No:	#0419130

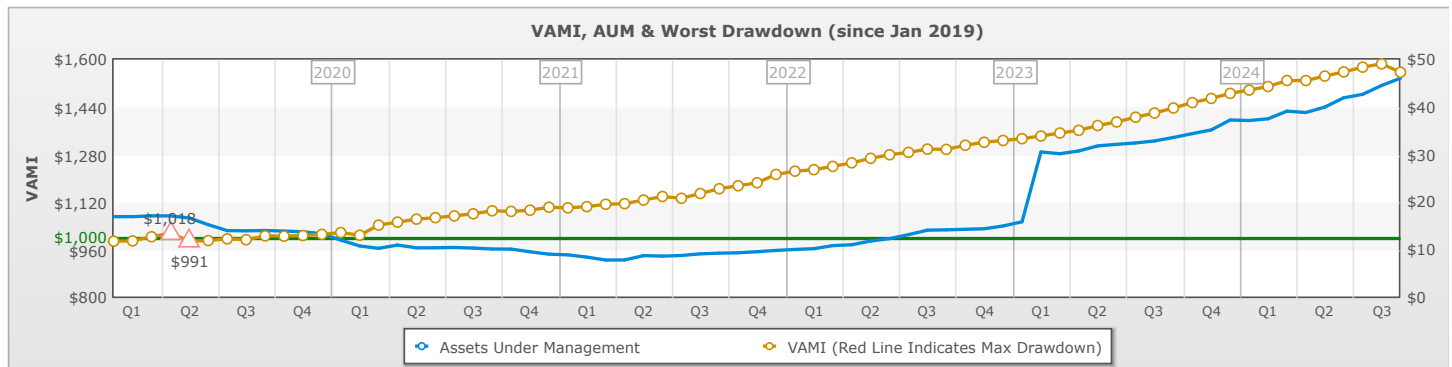

Trading Strategy

- 85% Systematic
- 15% Discretionary

Market Segment

- 100% Stock Indices

+ NOTES:

** The drawdown begins in the month listed as start. The length in months of the drawdown is listed under length. The recovery begins in the following month, and the length of the recovery period is listed under recovery. The date listed as end is the month that the program recovered from the drawdown.

Please note that the monthly performance numbers, ROR and Drawdowns are based on end of month values and are not reflective of intramonth volatility.

Statistical Notes

1. Peak to Valley Drawdown ("Maximum Drawdown") is the worst drawdown % loss over the period of 2019-01-31 to 2024-09-30
2. The Annualized Compounded ROR is the average return of an investment over a number of years. It smoothes out returns by assuming constant growth.
3. Calmar Ratio Uses last 36 months of Data

ROR = Rate of Return

AG CTA Index: The Autumn Gold CTA Index is a Non-Investable Index comprised of the client performance of all CTA programs included in the AG database and does not represent the complete universe of CTAs. CTA programs with proprietary performance are not included. Monthly numbers are updated until 45 days after the end of the month. Investors should note that it is not possible to invest in this index.

SP 500 TR: The S&P 500 indices are designed to reflect all sectors of the U.S. equity markets. The S&P 500 includes 500 blue chip, large cap stocks, which together represent about 75% of the total U.S. equities market. Companies eligible for addition to the S&P 500 have market capitalization of at least US\$3.5 billion. The TR Index accounts for the reinvestment of dividends.
