**Program Description:** The Micro Short Term Futures program is a highly systematic and diversified approach to trading, utilizing the Market Profile® methodology to identify momentum trades across a portfolio of 16 futures markets. Our proprietary software employs time-variable data sets, studies, and dynamic risk management techniques to create a system with convexity that is effective in all market conditions. Additionally, we utilize artificial intelligence to ensure consistent execution without human bias. With an average trade holding period of 7 days, our system is able to identify opportunities beyond the reach of traditional CTAs. These unique characteristics enable us to provide diversifying attributes beyond the specific markets we trade.
